PROFESSIONAL SUMMARY

Analytics-focused entertainment and product professional with 20 years at Sony Pictures. Experienced in relational databases, large-scale data quality and validation, performance reporting, experimentation, and team leadership. Led teams overseeing 400,000+ database records, migrated 100,000+ records to an internal database that reduced ongoing costs to under $100 per month, and partnered with data teams using Tableau reporting and A/B testing to inform product improvements. Complemented by formal data science and AI training and project work in SQL, Python, statistics, visualization, and machine learning.

CORE SKILLS

Data & Reporting Data quality, data validation, data management, relational databases, Tableau, Excel, reporting, KPI monitoring	**Programming & Tools** SQL, Python, Pandas, NumPy, Matplotlib, scikit-learn, GitHub, Streamlit
Analytics A/B testing, hypothesis testing, causal impact analysis, regression, classification, clustering, customer segmentation	**Leadership & Operations** Team leadership, process improvement, quality assurance, project management, cross-functional collaboration, research

PROFESSIONAL EXPERIENCE

Senior Manager | Sony Pictures Entertainment — Culver City, CA | Jul 2021–Jun 2025

- Migrated 100,000+ records from an external service into a new internal relational database, helping reduce monthly maintenance costs from thousands of dollars to less than $100 while increasing data security and eliminating vendor delays for updates and fixes.
- Hired and led a four-person team producing 10 Jeopardy! Bar League games per week; a competing eight-person team produced five, so the team I led had four times the output per person of the competing team.
- Managed quality assurance for 60 Jeopardy! J!6 trivia questions per week from two writers, fact-checking content, identifying duplicates, resolving conflicting information, correcting errors, and developing style guidelines.

Manager | Sony Pictures Entertainment — Culver City, CA | Jan 2016–Jul 2021

- Managed an eight-person team responsible for the integrity and quality of a relational database containing 400,000+ records; established validation workflows enabling each team member to review more than 1,000 records per week.
- Collaborated with data teams to analyze weekly Tableau reports and A/B testing results for a Jeopardy! mobile game, using performance insights to inform retention improvements and help increase revenue and average session length. The app reached #1 in its category for revenue and play activity across multiple years.
- Led quality assurance testing and improvement of voice-recognition technology for a Jeopardy! party game, helping deliver a seamless user experience; I won an Emmy Award for Outstanding Interactive Media for this work.

Researcher | "Jeopardy!" — Sony Pictures Entertainment | Sep 2005–Jan 2016

- Reviewed show content for factual accuracy, style consistency, grammar, spelling, and other errors; averaged five categories per day against an expectation of three, exceeding the required output by 67%.
- Advanced to reviewing other researchers' work and validating more than 14,000 questions annually, identifying errors and inconsistencies before taping.
- Researched a wide range of subject areas, resolved content issues, and communicated clear explanations and corrections to colleagues.

SELECTED ANALYTICS PROJECTS

Campaign Performance Analysis | Python, Statistics

- Compared signup rates for customers receiving high- and low-cost mailers; evaluated the observed 5% difference using a chi-square test and recommended against higher mailer spending because the result was not statistically compelling.

Customer Loyalty Prediction | Python, Pandas, scikit-learn

- Built machine learning models to predict missing customer loyalty scores for approximately half of the customer base; achieved an adjusted R-squared of 0.95 to support more targeted customer outreach.

Customer Segmentation | Python, K-Means Clustering

- Applied k-means clustering to grocery transaction data to identify distinct shopper segments and inform more relevant content and promotional targeting.

EDUCATION & CERTIFICATION

Data Science & AI Professional Certification (CPD Accredited) — Data Science Infinity, 2026

B.A., History — University of California, Los Angeles, 2005
