MOTIVATION

I am passionate about [solving business problems](#) using data science and analytics. I systematically and creatively use my skill set to [add tangible value](#) to the team, the business, and the end user. I am constantly learning and always looking to improve.

SKILLS & TOOLS

Programming: SQL, Python

Tools: Excel, Tableau, GitHub, Anaconda, Streamlit, Airtable

Statistics: Hypothesis Testing, A/B Testing, Central Limit Theorem, Distributions

Algorithms: Linear Regression, Logistic Regression, Decision Trees, Random Forest, KNN, K-Means Clustering, Principal Component Analysis, Association Rule Learning, Causal Impact Analysis

PROJECTS

Assessing Campaign Performance

- Comparing customers who received two different mailers, I used a [chi-square test](#) to determine if spending more on advertising led to more sales. The results of this type of [A/B test](#) can guide a business into deciding if an increased expenditure is cost effective.

Predicting Customer Loyalty Using Machine Learning

- Built [machine learning](#) models (including [linear regression and random forest](#)) to predict loyalty scores for the ~50% of customers with missing data, selecting the best-performing model by [accuracy score](#). This can help target the customers who are most likely to patronize a business.

The "You Are What You Eat" Customer Segmentation

- Applying [k-means clustering](#) on grocery transaction data, I segmented customers into distinct "shopper types" that could be used to better understand customers over time and to more accurately target customers with relevant content and promotions.
-

COURSES & CERTS

Data Science Professional Certification (Data Science Infinity) (in progress)

Actionable Learnings: Extracted, cleaned, and manipulated data using SQL and Python. Applied statistical inference, A/B testing, and causal impact analysis. Built regression, classification, clustering, and association rule models using full ML workflows (feature engineering, model validation, and automated ML pipelines). Created dashboards in Tableau and deployed a complete ML system to a live Streamlit application. Focused throughout on turning ambiguous business problems into measurable, data-driven solutions.

EXPERIENCE

Researcher / Content Manager / Senior Content Manager - Sony Pictures Entertainment

SEPTEMBER 2005 - JUNE 2025

- Working with data teams utilizing [weekly Tableau reports](#) and [A/B Testing](#) to monitor and increase user retention for "Jeopardy!" app, we were able to [increase revenue and average session length](#) to make the app the [top-grossing](#) and most-played in its category for multiple years.
- For my work on a play-along "Jeopardy!" game, I won an [Emmy Award](#) for Outstanding Interactive Media. I managed a team that made sure the voice-recognition technology worked seamlessly within the game to increase customer satisfaction.
- To [decrease costs](#) for the company and [increase internal control](#) over the projects we were working on, I helped [create a content management system](#). Previous projects relied on an expensive database company that charged for the creation and maintenance of a database. Using Airtable, we were able to [remove both the cost and the time](#) spent waiting for the outside company to respond to our needs.

EDUCATION

B.A. (History)

2001 - 2005 - University of California, Los Angeles
